Keywords: *Rationality, thinking, ideal, empirical thinking, rationality.*

Rationalization - rationalizes and rationalizes an event or phenomenon. In the process of cognition, it rationally organizes the types of existence, such as events and phenomena, according to the situation.

Rationality this is intelligence. People in this own mind and will with movement makes, objectively logical conclusions correct bringing releases In rationality to the mind , to the mind to the principles based on activity take will go.

Rational thinking and rational thinking mind with to know , that is intellectual is to know. Rational thinking and rational in thought also an objective assessment main from places one of them occupies But rational thinking time to pass with of humanity evolution as a result change, progress meat goes Rational to think human theoretical and practical in activity clearly expression will be Rationality and empirical reasoning from each other differs. One from the side rationality analysis qualitative methodological is a tool, secondly and analysis is the subject. Thirdly and rationality values to the quality input It is possible. three appearance rationality to a minimum to understand possibility gives.

Of rationality one how much degrees exists and they are:

1. Of knowledge evidence to the proofs to lean on;
2. The goal correct sheep to know;
3. Logic;
4. Knowledge method and methodology correct selection;
5. Adequacy principle;
6. Planning;
7. Knowledge in the process possibility as much as possible spontaneity the most little to the minimum arrival;
8. Prophecy;
9. The situation is always consciousness under control standing;
10. Correct assessment;

This from degrees people everyday in his work, as well scientific in activity uses Man every what in activity this from the rules use is appropriate.

Of rationality of the types outside forms also exists and they are always every one to the era suitable changed stands For example: XVIII - XIX centuries of mathematics rationality paradigm because viewed Rationality in explanation and formal logical correctness and was.

considered an empirical subject of thought. The 10th and 11th centuries to the end come in science rationality one bath was found to be limited.

XVII - XVIII in the centuries in science rational ideal objects general and important characteristics reflection It is a science. deductive - axiomatic devices This is used. during fanning purpose rationality theory through reflection to introduce was. Theory and in itself commonality reflection It will make you laugh.

The 20th century rationality in science new in appearance expression be Axiomatic devices , hypothetical-deductive approaches replaced. In science also in philosophy also of people everyday and scientific in activity also rationality, above seeing as before, har one during variously understood although, but his/her main content essence in its entirety changed It won't go away.
